

Fire Safety Smart

Teaching young children about fire safety can be challenging. Many children think fire is fun and easy to control. The misconception is likely to do the fact that a child's first experience with fire is candles on a birthday cake or a campfire at a family outing. Young children do not understand that a tiny flame is capable of becoming an uncontrollable blaze. They are also incapable of understanding the consequences of playing with fire and how it could lead to losing their home or even a loved one.

Tips for a "Fire Safe"

Environment

- Make sure your smoke detector/alarm system is in working order by testing it monthly.
- Make sure your smoke detectors/alarms are installed in the right places. Ask your local fire department for help.
- Locate two escape routes from each room. Diagram and post these directions in each room.
- Plan for a designated meeting area out of the building in a safe location.
- Fire extinguishers should be readily available. Make sure their usage date has not expired. All staff should know how to use them.
- Practice and document fire drills on a monthly basis.
- Prohibit staff from bringing lighters or matches to the facility.
- Keep all flammable products such as gas, kerosene, and motor oil out of the child care environment.
- Make sure blankets, curtains and other fabrics are flame retardant.
- Know where to find the gas "shut off" valve.

Talking to Young Children

- Teach children to know the sound of fire alarms. Teach them to exit the building immediately when they hear them.
- Encourage children to follow directions and stay calm during fire drills.
- Reinforce that matches and lighters should never be touched by children.
- Stress the importance of telling an adult immediately if lighters or matches are found.
- Teach that hot things burn and hurt when touched.
- Teach "Stop, Drop, and Roll" or "Stop, Lock, and Roll" for children in wheelchairs.
- Invite a firefighter to talk with children and show them what a fire fighter looks like in full gear.

Talking Points for Parents

- Discuss the fire safety precautions that are being taken to ensure their child's safety.
- Explain the importance of performing similar activities at home such as doing regular fire drills and checking smoke detectors and fire extinguishers.
- Ask families about their escape plans and safe meeting places.
- Stress the importance of reminding children never to touch candles, matches, or lighters.
